

# SAFETY DATA SHEET

## 1. Identification

Product identifier	ALUMINUM EXTRUSIONS, ANODIZED ALUMINUM PRODUCTS
Other means of identification	
SDS number	509
Version #	06
Revision date	May 27, 2015.
Other means of identification	
Synonyms	Aluminum Alloys 6xxx Series
Recommended use	Fabricated aluminum parts and products
Recommended restrictions	None known.
Manufacturer/Importer/Supplier/E	Distributor information
Manufacturer	
	Alcoa Inc. 201 Isabella Street Pittsburgh, PA 15212-5858 USA Health and Safety Tel: 1-412-553-4649 Health and Safety Fax: 1-412-553-4822 Health and Safety Email: accmsds@alcoa.com
Emergency Information	CHEMTREC: +1-703-527-3887 +1-800-424-9300 (24 Hour Emergency Telephone, multiple languages spoken); ALCOA: +1-412-553-4001 (24 Hour Emergency Telephone, only English spoken)
Website	For a current Safety Data Sheet, refer to Alcoa websites: www.alcoa.com or internally at my.alcoa.com EHS Community
2. Hazard(s) identification	
Physical hazards	Not classified.
Health hazards	Not classified.
Environmental hazards	Not classified.
Authority defined hazards	Combustible dust
Label elements	
Hazard symbol	None.
Signal word	Warning
Hazard statement	May form combustible dust concentrations in air.
Precautionary statement	
Prevention	Prevent dust accumulation to minimize explosion hazard.
Response	Not assigned.
Storage	Not assigned.
Disposal	Reuse or recycle material whenever possible.
Hazard(s) not otherwise classified (HNOC)	None known.

Supplemental information

Dust and fume from processing: Can cause irritation of the eyes, skin and respiratory tract. Additional health effects from elevated temperature processing (e.g., welding, melting): Acute overexposure: Can cause metal fume fever, reduced ability of the blood to carry oxygen and the accumulation of fluid in the lungs.

Non-combustible as supplied. Small chips, fine turnings and dust from processing may be readily ignitable.

Explosion/fire hazards may be present when:

- Dust or fines are dispersed in air.
- Chips, dust or fines are in contact with water.
- Dust and fines are in contact with certain metal oxides (e.g., rust, copper oxide).
- Molten metal is in contact with water/moisture or certain metal oxides (e.g., rust, copper oxide).

## 3. Composition/information on ingredients

**Composition comments** Complete composition is provided below and may include some components classified as non-hazardous.

Mixtures			
Chemical name	Common name and synonyms	CAS number	%
Aluminum		7429-90-5	96 - 99
Zinc		7440-66-6	<6.5
Manganese		7439-96-5	<1.5
Magnesium		7439-95-4	<1.2
Chromium		7440-47-3	<0.35
Additional Information	Exact composition will vary. Unless additional in that all potential ingredients are present. Additional compounds which may be formed due	formation is available, pro	ocessor should assume in Section 8.
4. First-aid measures			
Eye contact	Dust and fumes from processing: Rinse eyes wir Consult a physician.	th plenty of water or salin	e for at least 15 minutes.
Skin contact	Dust and fumes from processing: Wash with soa attention if irritation develops or persists.	ap and water for at least 1	15 minutes. Get medical
Inhalation	Dust and fumes from processing: Remove to fre presence of pulse. Provide cardiopulmonary res If breathing is difficult, provide oxygen. Loosen a physician.	esh air. Check for clear ain uscitation for persons wit any tight clothing on neck	way, breathing, and hout pulse or respirations or chest. Consult a
Ingestion	Not relevant, due to the form of the product.		
Most important symptoms/effects, acute and delayed	Dust and fumes from processing: Can cause irri See Section 11 of the SDS for additional information	tation of the eyes, skin ar ation on health hazards.	nd upper respiratory tract.
Medical conditions aggravated by exposure	Dust and fume from processing: Asthma, chroni and skin rashes.	c lung disease, Secondai	ry Parkinson's disease
Indication of immediate medical attention and special treatment needed	Provide general supportive measures and treat	symptomatically.	
General information	Ensure that medical personnel are aware of the protect themselves.	material(s) involved, and	take precautions to
5. Fire-fighting measures			
Suitable extinguishing media	Use Class D extinguishing agents on fines, dust Use water spray to cool exposed containers.	or molten metal.	
Unsuitable extinguishing media	DO NOT USE halogenated extinguishing agents DO NOT USE water in fighting fires around molt These fire extinguishing agents will react with th	s on small chips/fines. en metal. e burning material.	

Specific hazards arising from the chemical	May be a potential hazard under the following conditions: • Dust clouds may be explosive. Even a minor dust cloud can explode violently. Dust accumulation on the floor, ledges and beams can present a risk of ignition, flame propagation and secondary explosions
	<ul> <li>Chips, fines and dust in contact with water can generate flammable/explosive hydrogen gas. These gases could present an explosion hazard in confined or poorly ventilated spaces.</li> <li>Dust and fines in contact with certain metal oxides (e.g., rust, copper oxide). A thermite reaction, with considerable heat generation, can be initiated by a weak ignition source.</li> <li>Molten metal in contact with water/moisture or certain metal oxides (e.g., rust, copper oxide). Moisture entrapped by molten metal can be explosive. Contact of molten aluminum with certain metal oxides can initiate a thermite reaction. Finely divided metals (e.g., powders or wire) may have enough surface oxide to produce thermite reactions/explosions.</li> </ul>
Special protective equipment and precautions for firefighters	Firefighters should wear NIOSH approved, positive pressure, self-contained breathing apparatus and full protective clothing when appropriate.
General fire hazards	This product does not present fire or explosion hazards as shipped. Small chips, fine turnings, and dust from processing may be readily ignitable.
Explosion data Sensitivity to mechanical impact	Not sensitive.
Sensitivity to static discharge	Not sensitive. Dust from processing Take precautionary measures against static discharges.
6. Accidental release meas	sures
Personal precautions, protective equipment and emergency procedures	Avoid contact with sharp edges or heated metal. Use personal protection recommended in Section 8 of the SDS.
Personal precautions, protective	equipment and emergency procedures
For emergency responders	Avoid contact with sharp edges or heated metal. Use personal protection recommended in Section 8 of the SDS.
Evacuation procedures	None necessary.
Methods and materials for containment and cleaning up	Pick up mechanically. Collect scrap for recycling. If molten: Use dry sand to contain the flow of material. All tooling (e.g., shovels or hand tools) and containers which come in contact with molten metal must be preheated or specially coated, rust free and approved for such use. Allow the spill to cool before remelting as scrap.
Environmental precautions	No special environmental precautions required.
7. Handling and storage	
Handling	Avoid generating dust. Avoid contact with sharp edges or heated metal. Hot and cold aluminum are not visually different. Hot aluminum does not necessarily glow red. Use personal protection recommended in Section 8 of the SDS.
Storage	Keep material dry.
Requirements for Processes Which Generate Dusts or Fines	If processing of this product generates dust or if extremely fine particulate is generated, obtain and follow the safety procedures and equipment guides contained in Aluminum Association Bulletin F-1 and National Fire Protection Association (NFPA) standards listed in Section 16.
	Use non-sparking handling equipment, tools and natural bristle brush. Cover and reseal partially empty containers. Provide grounding and bonding where necessary to prevent accumulation of static charges during metal dust handling and transfer operations (See Section 15).
	Local ventilation and vacuum systems must be designed to handle explosive dusts. Dry vacuums and electrostatic precipitators must not be used, unless specifically approved for use with flammable/explosive dusts. Dust collection systems must be dedicated to aluminum dust only and should be clearly labeled as such. Do not co-mingle fines of aluminum with fines of iron, iron oxide (rust) or other metal oxides.
	Do not allow small chunks, fines or dust to contact water, particularly in enclosed areas.
	Avoid all ignition sources. Good housekeeping practices must be maintained. Do not use compressed air to remove settled material from floors, beams or equipment.

Requirements for Remelting of Scrap Material or Ingot

Molten metal and water can be an explosive combination. The risk is greatest when there is sufficient molten metal to entrap or seal off the water. Water and other forms of contamination on or contained in scrap or remelt ingot are known to have caused explosions in melting operations. While the products may have minimal surface roughness and internal voids, there remains the possibility of moisture contamination or entrapment. If confined, even a few drops of water can lead to violent explosions.

All tooling, containers, molds and ladles which come in contact with molten metal must be preheated or specially coated, rust free and approved for such use. Any surfaces that may contact molten metal (e.g., concrete) should be specially coated.

Drops of molten metal in water (e.g. from plasma arc cutting), while not normally an explosion hazard, can generate enough flammable hydrogen gas to present an explosion hazard. Vigorous circulation of the water and removal of the particles minimize the hazards.

During melting operations, the following minimum guidelines should be observed:

• Inspect all materials prior to furnace charging and completely remove surface contamination such as water, ice, snow, deposits of grease and oil or other surface contamination resulting from weather exposure, shipment, or storage.

· Store materials in dry, heated areas with any cracks or cavities pointed downwards.

• Preheat and dry large items adequately before charging into a furnace containing molten metal. This is typically done by use of a drying oven or homogenizing furnace. The drying cycle should bring the metal temperature of the coldest item of the batch to 400°F (200°C) and then hold at that temperature for 6 hours.

## 8. Exposure controls/personal protection

#### **Occupational exposure limits**

Components	Туре	Value	Form
Aluminum (CAS 7429-90-5)	TWA	5 mg/m3	Respirable fraction
		15 mg/m3	Total dust
Chromium (CAS 7440-47-3)	TWA	1 mg/m3	
Manganese (CAS 7439-96-5)	Ceiling	5 mg/m3	Fume
Compounds Formed During Processing	Туре	Value	Form
Aluminum oxide (non-fibrous) (CAS 1344-28-1)	TWA	5 mg/m3	Respirable fraction.
		15 mg/m3	Total dust.
Chromium (II) compounds	TWA	0.5 mg/m3	(as Cr)
Chromium (III) compounds	TWA	0.5 mg/m3	(as Cr)
Chromium (VI) compounds, certain water insoluble forms	TWA	0.0025 mg/m3	Action Level as Cr(VI))
Chromium (VI) compounds (CAS 18540-29-9)	TWA	0.0025 mg/m3	Action Level as Cr(VI)
Magnesium oxide (CAS 1309-48-4)	TWA	15 mg/m3	Total particulate.
Manganese compounds, inorganic	Ceiling	5 mg/m3	(as Mn) Fume
Nitric oxide (CAS 10102-43-9)	TWA	30 mg/m3	
		25 ppm	
Ozone (CAS 10028-15-6)	TWA	0.2 mg/m3	
		0.1 ppm	
Zinc oxide (CAS 1314-13-2)	TWA	5 mg/m3	Respirable fraction.
. ,		5 mg/m3	Fume.
		15 ma/m3	Total dust.

## 9. Physical and chemical properties

Form	Solid.	
Color	Silvery.	
Odor	Odorless	
Odor threshold	Not applicable	
рН	Not applicable	
Density	2.69 - 2.70 g/cm3 (0.097 - 0.098 lb/in3)	
Melting point/freezing point	1025 - 1210 °F (551.67 - 654.44 °C)	
Initial boiling point and boiling range	Not determined	
Flash point	Not applicable	
Evaporation rate	Not applicable.	
Flammability (solid, gas)	Not applicable.	
Upper/lower flammability or explosive limits		
Flammability limit - upper (%)	Not applicable	
Flammability limit - lower (%)	Not applicable	
Explosive properties	Not applicable.	
Vapor pressure	Not applicable	
Vapor density	Not applicable	
Relative density	Not determined.	
Solubility(ies)	Insoluble	
Partition coefficient (n-octanol/water)	Not applicable.	
Auto-ignition temperature	Not applicable	
Decomposition temperature	Not applicable.	
Viscosity	Not applicable.	

## 10. Stability and reactivity

Reactivity	The product is stable and non-reactive under normal conditions of use, storage and transport.
Chemical stability	Stable under normal conditions of use, storage, and transportation as shipped.
Possibility of hazardous reactions	Hazardous polymerization does not occur.
Conditions to avoid	<ul> <li>Chips, fines, dust and molten metal are considerably more reactive with the following:</li> <li>Water: Slowly generates flammable/explosive hydrogen gas and heat. Generation rate is greatly increased with smaller particles (e.g., fines and dusts). Molten metal can react violently/explosively with water or moisture, particularly when the water is entrapped.</li> </ul>

with water or moisture, particularly when the water is entrapped.Heat: Oxidizes at a rate dependent upon temperature and particle size.

Incompatible materials	<ul> <li>Chips, fines, dust and molten metal are considerably more reactive with the following:</li> <li>Strong oxidizers: Violent reaction with considerable heat generation. Can react explosively with nitrates (e.g., ammonium nitrate and fertilizers containing nitrate) when heated or molten.</li> <li>Acids and alkalis: Reacts to generate flammable/explosive hydrogen gas. Generation rate is greatly increased with smaller particles (e.g., fines and dusts).</li> <li>Halogenated compounds: Many halogenated hydrocarbons, including halogenated fire extinguishing agents, can react violently with finely divided or molten aluminum.</li> <li>Iron powder and water: Explosive reaction forming hydrogen gas when heated above 1470°F (800°C).</li> <li>Iron oxide (rust) and other metal oxides (e.g., copper and lead oxides): A violent thermite reaction generating considerable heat can occur. Reaction with aluminum fines and dusts requires only very weak ignition sources for initiation. Molten aluminum can react violently with iron oxide without external ignition source.</li> </ul>
Hazardous decomposition products	No hazardous decomposition products are known.

## **11. Toxicological information**

#### Health effects associated with ingredients

Aluminum dust/fines and fumes: Low health risk by inhalation. Generally considered to be biologically inert.

Chromium dust and fumes: Can cause irritation of eye, skin and respiratory tract. Metallic chromium and trivalent chromium: Not classifiable as to their carcinogenicity to humans by IARC.

Some products are supplied with an oil coating or have residual oil from the manufacturing process. Oil: Can cause irritation of skin. Skin contact (prolonged or repeated): Can cause dermatitis.

#### Health effects associated with compounds formed during processing

The following could be expected if welded, remelted or otherwise processed at elevated temperatures:

Alumina (aluminum oxide): Low health risk by inhalation. Generally considered to be biologically inert.

Zinc oxide fumes: Can cause irritation of upper respiratory tract. Acute overexposures: Can cause metal fume fever (nausea, fever, chills, shortness of breath and malaise).

Manganese oxide fumes: Can cause irritation of the eyes, skin, and respiratory tract. Acute overexposures: Can cause metal fume fever (nausea, fever, chills, shortness of breath and malaise).

Manganese compounds: Chronic overexposures: Can cause inflammation of the lung tissues, scarring of the lungs (pulmonary fibrosis), central nervous system damage. Secondary Parkinson's Disease and reproductive harm in males.

Hexavalent chromium compounds (Chromium VI): Can cause irritation of eye, skin and respiratory tract. Skin contact: Can cause irritant dermatitis, allergic reactions and skin ulcers. Chronic overexposures: Can cause perforation of the nasal septum, respiratory sensitization, asthma, the accumulation of fluid in the lungs (pulmonary edema), lung damage, kidney damage, lung cancer, nasal cancer and cancer of the gastrointestinal tract. IARC/NTP: Listed as "known to be a human carcinogen" by the NTP. Listed as carcinogenic to humans by IARC (Group 1).

If the product is heated well above ambient temperatures or machined, oil vapor or mist may be generated. Oil vapor or mist: Can cause irritation of respiratory tract. Acute overexposures: Can cause bronchitis, headache, central nervous system effects (nausea, dizziness and loss of coordination) and drowsiness (narcosis).

Welding, plasma arc cutting, and arc spray metalizing can generate ozone.

Ozone: Can cause irritation of eves, nose and upper respiratory tract. Acute overexposures; Can cause shortness of breath. tightness of chest, headache, cough, nausea and narrowing of airways. Effects are reversible on cessation of exposure. Acute overexposures (high concentrations): Can cause respiratory distress, respiratory tract damage, bleeding and the accumulation of fluid in the lungs (pulmonary edema). Effects can be delayed up to 1-2 hours. Additional information: Studies (inhalation) with experimental animals have found genetic damage, reproductive harm, blood cell damage, lung damage and death.

Welding fumes: IARC/NTP: Listed as possibly carcinogenic to humans by IARC (Group 2B). Additional information: In one study, occupational asthma was associated with exposures to fumes from aluminum welding.

Plasma arc cutting of aluminum can generate oxides of nitrogen.

Oxides of nitrogen (NO and NO2): Can cause irritation of eyes, skin and respiratory tract. Acute overexposures: Can cause reduced ability of the blood to carry oxygen (methemaglobin). Can cause cough, shortness of breath, accumulation of fluid in the lungs (pulmonary edema) and death. Effects can be delayed up to 2-3 weeks. Nitrogen dioxide (NO2): Chronic overexposures: Can cause scarring of the lungs (pulmonary fibrosis).

#### Information on likely routes of exposure

Eye contact	Dust and fumes from processing: Can cause irritation.
Skin contact	Dust and fumes from processing: Can cause irritation.
Inhalation	Acute overexposure: Can cause metal fume fever (nausea, fever, chills, shortness of breath and malaise), reduced ability of the blood to carry oxygen (methemoglobin) and the accumulation of fluid in the lungs (pulmonary edema). Dust: Can cause irritation of the upper respiratory tract.
	Additional health effects from elevated temperature processing (e.g., welding, melting): Fumes: Can cause irritation of the respiratory tract. Chronic overexposures: Can cause respiratory sensitization, scarring of the lungs (pulmonary fibrosis), secondary Parkinson's disease, reproductive harm in males and lung cancer.
Ingestion	Not relevant, due to the form of the product.
Symptoms related to the physical, chemical and toxicological characteristics	Dust and fumes from processing: Can cause irritation of the eyes, skin and respiratory tract.

THE REPORT OF THE F	Dianagal ganaidaratic	200		

# Disposal instructionsReuse or recycle material whenever possible. If reuse or recycling is not possible, disposal must<br/>be made according to local or governmental regulations.Waste codesRCRA Status: Not federally regulated in the U.S. if disposed of "as is."Waste from residues / unused<br/>productsRCRA waste codes other than described here may apply depending on use of the product. Status<br/>must be determined at the point of waste generation. Refer to 40 CFR 261 or state equivalent in<br/>the U.S. TCLP testing is recommended for chromium in a waste disposal scenario.Waste from residues / unused<br/>productsIf reuse or recycling is not possible, disposal must be made according to local or governmental<br/>regulations.Dispose of in accordance with local regulations.Dispose of in accordance with local regulations.

## 14. Transport information

#### General Shipping Information

<b>Basic Shipping Information</b>	
ID number	-
Proper shipping name	Not regulated
Hazard class	-
Packing group	-

#### **General Shipping Notes**

• When "Not regulated", enter the proper freight classification, SDS Number and Product Name onto the shipping paperwork.

#### Disclaimer

This section provides basic classification information and, where relevant, information with respect to specific modal regulations, environmental hazards and special precautions. Otherwise, it is presumed that the information is not available/not relevant

#### 15. Regulatory information

US federal regulations	In reference to Title VI of the Clean Air Act of 1990, this material does not contain nor was it
-	manufactured using ozone-depleting chemicals.

All electrical equipment must be suitable for use in hazardous atmospheres involving aluminum powder in accordance with 29 CFR 1910.307. The National Electrical Code, NFPA 70, contains guidelines for determining the type and design of equipment and installation which will meet this requirement.

#### TSCA Section 12(b) Export Notification (40 CFR 707, Subpt. D)

Not regulated.	
CERCLA Hazardous Substance List (40 CFR 3	302.4)
Chromium (CAS 7440-47-3)	Listed
Manganese (CAS 7439-96-5)	Listed
Zinc (CAS 7440-66-6)	Listed

#### Superfund Amendments and Reauthorization Act of 1986 (SARA)

Section 311/312 hazard	Immediate Hazard - Yes	If particulates/fumes generated during processing
categories	Delayed Hazard - Yes	If particulates/fumes generated during processing
	Fire Hazard - No	
	Pressure Hazard - No	
	Reactivity Hazard - Yes	If molten

#### SARA 302 Extremely hazardous substance

Chemical name	CAS number	Reportable quantity	Threshold planning quantity	Threshold planning quantity, lower value	Threshold planning quantity, upper value
Ozone	10028-15-6	100	100 lbs		
Nitric oxide	10102-43-9	10	100 lbs		
Nitrogen dioxide	10102-44-0	10	100 lbs		

# SARA 311/312 Hazardous No chemical

#### SARA 313 (TRI reporting)

## Hazard statement

May form combustible dust concentrations in air.

# **Precautionary statement**

## Prevention

Keep away from heat/sparks/open flames/hot surfaces - No smoking. Keep container tightly closed. Ground/bond container and receiving equipment. Prevent dust accumulation to minimize explosion hazard. Observe good industrial hygiene practices.

## Response

Take off contaminated clothing and wash before reuse. In case of fire: Use appropriate media to extinguish.

## Storage

Store away from incompatible materials.

# Warning

# Supplemental information

**FIRE FIGHTING MEASURES:** This product does not present fire or explosion hazards as shipped. Small chips, fine turnings and dust from processing may be readily ignitable. Use Class D extinguishing agents on fines, dust or molten metal. Use coarse water spray on chips and turnings.

DO NOT USE halogenated extinguishing agents on small chips/fines.

DO NOT USE water in fighting fires around molten metal.

**IN CASE OF SPILL:** If molten: Use dry sand to contain the flow of material. All tooling (e.g., shovels or hand tools) and containers which come in contact with molten metal must be preheated or specially coated, rust free and approved for such use. Allow the spill to cool before remelting as scrap. Wear appropriate personal protective equipment.
